

#4 - Create a Sound Oscillator

What you ask is a sound oscillator?

Well it's a four sided sound containment unit with an oscillating top. In other words a cardboard box with a plywood top and it is so easy to make. First, stop by your local Best Buy or appliance sales center and ask for a refrigerator box (the whole box that the fridge comes in). The clerk will look at you weird but amazing enough you'll get a box. Next step, stop by your home improvement store and purchase a 4' x 4' piece of plywood. You now have your basic materials. Time to build your oscillator.

1. Stand your refrigerator box up
2. About head high, Cut a hole in each side of the box 1' wide by 2' tall (just enough to stick your head in)
3. Place the plywood across the top of the box for a ceiling
4. Grab 4 other guys (make it all 4 parts) and a pitch pipe
5. Each of you stick your heads into the box and sing!
6. Stand by to be amazed at what you hear
(That's why I call it the Sound Oscillator)

Refrigerator Box

*Cost of this program? Depends if you want to decorate your refrigerator box!
Otherwise FREE!*
